For their expanding India operations and to support the product development initiatives, client is looking for qualified and skilled S/W development professionals with a focus on a mutually worthwhile association.

Position Title: AVP

Functional Role: Lead

Work location: Noida

Experience: 5-9 yrs

Position Summary: The client is seeking an experienced Java/J2EE developer to join the team in India. This person will work closely with existing team members to develop and manage a comprehensive AJAX based product to address the needs of our clients. The role requires tight collaboration with product managers and business analysts to develop the products according to the business schedule.

General and deep experience with Core Java concepts and J2EE technologies are a must. Knowledge of AJAX based frameworks is a plus, but is not a requirement. Knowledge of relational database and SQL is must and knowledge of stored procedures /triggers is plus.

This position will suit candidates who enjoy both the technical and business aspects of developing, testing, and deploying software solutions to a schedule in an environment of high visibility and transparency around deliverables, business needs, and customer value.

Duties and Accountability:

- Work with product team to define use cases and specifications, advising in the crafting of tests and specifications that determine what is to be delivered
- Be pro-active and creative in answering business requirements
- Able to manage dependencies and timely manage priority.
- Build software of highly quality and in time efficient manner
- Build robust client-facing Web applications (or extend features of existing ones) using industry standard design practices.
- Be able to maintain and support all areas of the application.
- Assist testers to prepare test plans and test cases based on requirements specifications

- Assist in ensuring that defects and incidents are identified, prioritized and dealt with, and that any new versions of software are released in a controlled and timely manner

Business Competencies

- Education and experience**
- Degree in Computer Science or related field.
 - Minimum 5 years of development experience.
 - Expert knowledge of Java and Web technologies
 - Working knowledge of Java Script and Ajax techniques.
 - Good knowledge of SQL and Relational Databases in general
 - Knowledge of ExtJS JavaScript library is preferable but not required.

- Commercial awareness** Experience and understanding of the web development process and project lifecycles
- Management requirements** Experience of leading small teams, preferably within an agile environment (desirable but not required)

Personal competencies

- Personal impact**
- Proactive and able to work independently with minimal supervision
 - Displays energy, drive and stamina.
 - Open minded, flexible and willing to adapt to changing situations.
 - Focused on delivery.

- Communication**
- Must be an excellent communicator both written and verbally.

- Teamwork**
- Must be a strong team player.
 - Ability to collaborate effectively with overseas team.
