**Position Title:** Developer-Parsing

**Work location:** Noida

**Experience:** 4-6 yrs

**Department overview:**

The Client's Quotes is a real-time quote parsing system. The service extracts indicative over-the-counter pricing, providing traders and portfolio managers with real-time pricing data for CDS, indices, bonds, tranches, loans and other OTC asset classes.

**Position Summary:** A Java Developer is required to work on the Client Quotes backend platform.

The role will initially be learn the parsing engine and implement parsing of email messages, this would later on extend to other parts of the product like website, reporting and cache etc.

The role will require:

- Analysis of business requirements and specifications, designing, coding, testing and debugging of state of the art parsers for highly ambiguous financial information languages.
- Tight collaboration with product managers and expert business analysts to improve and evolve the existing parsers and address future business needs.
- Work with highly innovative, dynamic team using extreme programming and test driven development approach.
- Design and develop parsers for new asset classes. Extend existing parsers with new capabilities and new parsing patterns.

**Duties and Accountability:**

- Gather, analyse and refine business requirements.

- Develop tools to support and optimize the day to day tasks faced by our analysts
- Work with our infrastructure group to design and build enhanced monitoring tools to ensure throughput and uptime
- Understand system architecture and become involved in it's design.

## **Business Competencies**

### **Education and experience**

- Degree in Computer Science or related field.
- 4-6 years of development experience, preferably in a financial environment.
- Excellent knowledge of Java.
- Good knowledge of parsing utilities like Jflex/Byacc/ANTLR/LEX/YACC.
- Good knowledge of SQL and Oracle databases is desirable not essential.

### **Commercial awareness**

- Understanding of basic financial market terminology is desirable, but not essential

### **Management requirements**

- Dynamic and charismatic, demonstrating ability to motivate others.
- Must be hands on with technical ability to challenge others' work.
